# RUFUS

8 Port PCI Serial Card for Macintosh

Rufus adds 8 "smart" RS-232 serial ports to your PCI Power PC Macintosh. An on-board RISC processor and half a megabyte of local buffering ensures minimal loading of your Macintosh while supporting serial data rates up to 460,800 baud per port. Rufus is a perfect way to support any small to medium sized Mac BBS, multi-line fax or mail server, or to control multiple serial hardware devices. Multiple Rufus cards may be used in a single Macintosh to provide additional ports.

MegaWolf is a leader in Macintosh PCI serial expansion products, having released its "Fenris" line of expandable multiport PCI serial cards in the first quarter of 1996. Products planned for the near future include reasonably priced 2 and 4 port RS-422 Macintosh PCI Serial Expansion

Rufus Specifications:
- 8 serial ports per PCI card.
- On-board RISC processor & 512K RAM.
- No external modules required.
- Up to 460,800 baud per port.
